

CASH TRANSPORTATION FIRM LOOMIS MODERNIZES ITS COMMUNICATIONS WITH MOTOROLA SOLUTIONS

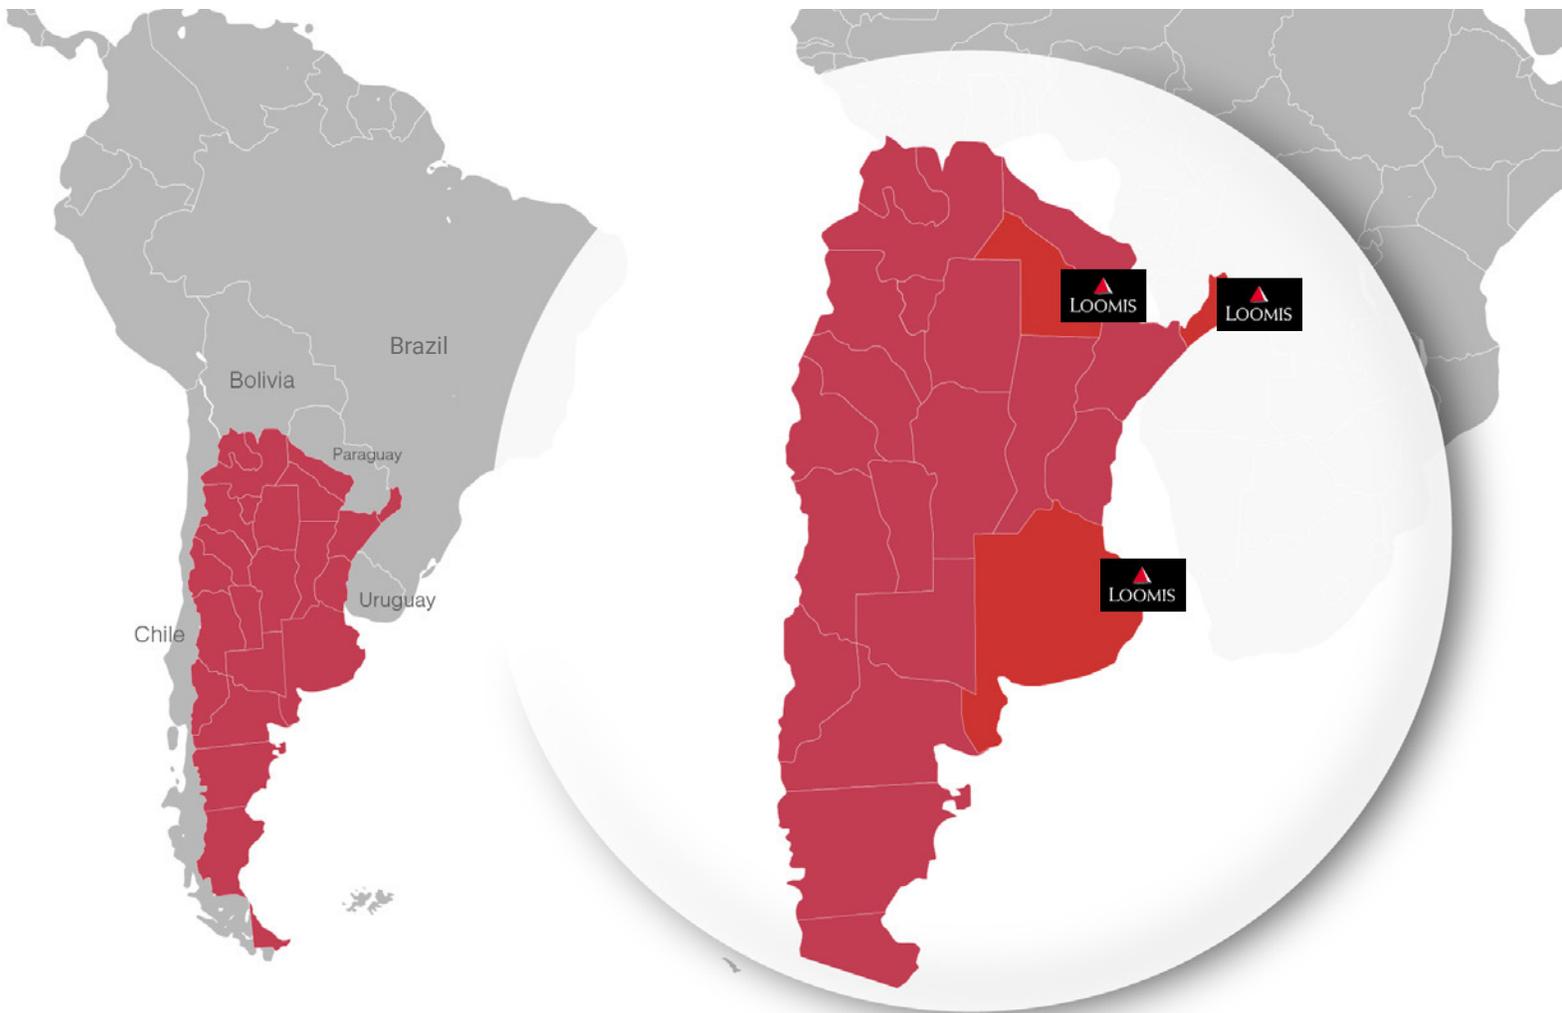

IN ARGENTINA, LOOMIS HAS BEEN TRANSPORTING ITS CUSTOMERS' VALUABLES SINCE 1996 IN COMPLETE SECURITY THANKS TO THE **CUTTING-EDGE SECURITY TECHNOLOGY** IT USES TO CARRY OUT COMPLETE CASH LOGISTICS WITH THE UTMOST ASSURANCE.

THE COMPANY

Loomis is the world leader in cash transportation, cash handling and ATM management. It has more than 440 operating locations and over 22,000 employees across more than 20 countries.

Loomis operates in the Autonomous City of Buenos Aires, Greater Buenos Aires, La Plata and the provinces of Corrientes, Chaco, Formosa and Misiones.

THE CHALLENGE

The company previously used cell phones as its primary mode of communication. These devices were not designed to meet employees' communication needs, as they didn't have the volume required for the company's operations and they were inefficient in terms of providing quick and immediate responses.

IMPLEMENTATION SUMMARY

COMPANY:

LOOMIS — TRANSPORTADORA DE CAUDALES VIGENCIA DUQUE SA

LOCATION:

Buenos Aires, Buenos Aires province, Argentina

VERTICAL MARKET:

Transport and logistics

MOTOROLA SOLUTIONS PRODUCTS:

TLK100
Dispatch Console

APPLICATIONS:

Wave PTX Two Way Radio licenses and Dispatch license

AREA COVERED:

Buenos Aires, Greater Buenos Aires, La Plata, Corrientes, Formosa, Chaco, Misiones and transport routes between these provinces and towns

THE SOLUTION

The solution involved providing them with a system comprising 120 TLK100 devices with Wave PTX service, plus a Dispatch Console. This solution allows them to maintain communications with cash-in-transit trucks, locate them online, and track their movements, which is critical given the nature of the trucks' activities.

The solution was implemented within 10 days, including training for terminal users and the dispatcher.

THE BENEFITS

After switching to our PTT communication services, the company now has national coverage, enabling improved communication with its cash-in-transit trucks wherever they are.

Our TLK100 devices are robust and lightweight, with functionalities that prevent distractions for users, enabling them to work faster and with improved security. The equipment also allows users to be located and their journeys to be tracked, while also maintaining smooth communication and maximizing information security by means of encryption.

“The benefit of their software is that it’s very user-friendly and agile to use, allowing us to optimize security and increase traceability in our operations.”

-Juan Pablo Descalzo, Head of purchasing
